Die Logik des Lebendigen. Eine Auseinandersetzung mit Leben und Lebendigem in Hegels Wissenschaft der Logik

Supervisor: Kurt Appel

Abstract (English)

The pivotal point of the Master thesis is the chapter on the idea of life from Hegel's Science of Logic. The thesis consists of four parts. It begins with an introduction to the key concepts of the Science of Logic, namely logic, idea and life. The second part attempts to address the crucial moments of the idea of life in individual chapters and place them in the context of the research debate. The third part is a dialogical commentary of the primary text and is the heart of the work. In the fourth and final chapter, four different interpretive approaches by four different authors are presented. This is intended to reflect the broad spectrum of interpretation.
